To our Friends and Colleagues,

Recently, I have received requests on how Vee Technologies Inc., a US Global Services company, continues to receive positive recognition, most lately by Inc. 500, as one of the fastest, privately held, growing companies in the USA.

The answer is anchored in our business model. At our core, is an undeniable commitment and passion to act with integrity, and deliver extraordinary outcomes that truly matter for your business.

Our clients regularly volunteer that they are so delighted with our services; they will gladly be a reference for Vee Technologies.

The reason is clear. With the challenging, highly regulated, demanding needs of the healthcare industry, Vee Technologies is a company that will jointly customize a compelling solution that uses our vast resources to get it right.

For example, currently, with the additional complexity of ICD10, many clients want Vee Technologies to take over the entire RCM process, whereas some simply want highly trained resources for a particular requirement.

Each client is unique. Each deserves the right amount of attention, analysis, and compelling solutions. Our founders own Sona University, a research institution with a population over 10,000 strong, widely acclaimed for continual excellence in education. Our solutions are as creative and adaptable as they need to be in order to satisfy our clients.

In these turbulent times in the healthcare industry, is there a place to go that truly saves money, but also delivers measurable quality?

A place where it is not a leap of faith when using outside resources?

Rather, where you have confidence in the quality of the resources, and an inherent sense of trust that you and Vee Technologies will jointly have a team that cares about each other, and cares about sustained quarter over quarter, year over year, positive results.

Don't take my word for it. Our references will speak for themselves.

At the end of the day, it may be time to try something different. May I suggest: try Vee Technologies. We commit to a long term relationship, and to build a team with you, under your guidance, to provide you with accurate healthcare solutions, for many years to come.

Thank you.
